SUMMARY

An innovative , Visionary and workholic determined to simplify the process of complexity at budding stage, always curious to learn endless.Data science and machine learning enthusiast with good command in python and c++ have a deep understanding of big data and machine learning and their application through practical data analysis.

PROJECTS

Twitter us inline sentiment analysis :
analyzes the sentiment or emotion of tweets. By using natural language processing and machine learning algorithms to classify tweets automatically as positive, negative, or neutral based on their content.

AI-Powered Trip Planner App:
Developed a comprehensive trip planning application using the MERN stack (MongoDB, Express.js, React, Node.js) with integrated AI capabilities for personalized travel recommendations. The app allows users to plan, manage, and optimize their travel itineraries efficiently.

Instabot :
Used the automated browsing tools provided by Selenium to log onto your account on the Instagram website, navigate past all of those annoying pop-ups, search the profile of some famous high profile people and just start following people that follow them randomly.
